Ever wondered how Amazon or Daraz handles different payments but still completes ONE order? 🤔
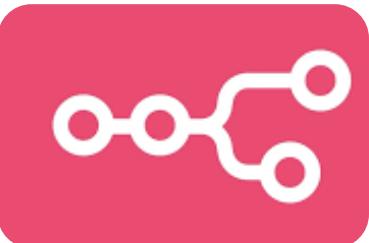

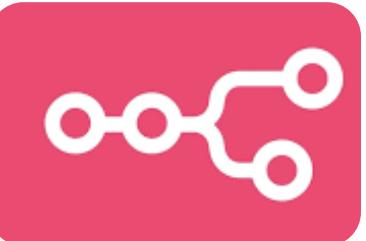

🔗 **What is a Merge Node?**

- A Merge Node combines data from multiple paths into one

- It is used after branching logic (IF / Switch)

- It brings different flows back into a single workflow

- It helps automation continue smoothly after decisions

⭐ **Why We Use Merge Node?**

- Avoids repeating the same steps again and again
- Keeps workflow clean and professional
- Makes automation scalable
- Ensures all paths reach the final step
- Required in real business workflows
