# What if your automation could think like a human? 🤯
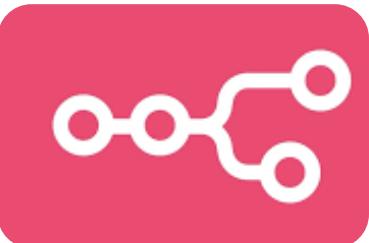

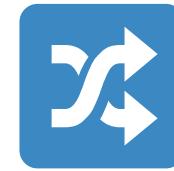

🧠 **Who is a Logic Lord?**
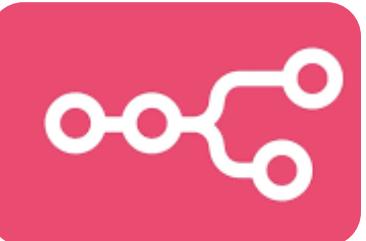

- A Logic Lord controls how automation makes decisions
- Knows when, why, and where data should go
- Uses logic nodes to handle real-world scenarios
- Builds workflows that act like a smart assistant, not a robot
- Understands business rules, not just connections
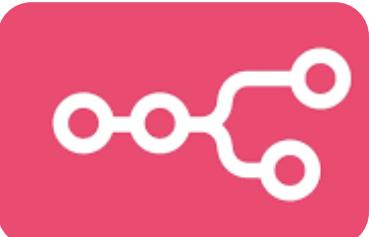

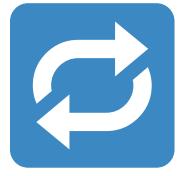

IF Node
(The Decision Maker)

TechZeen
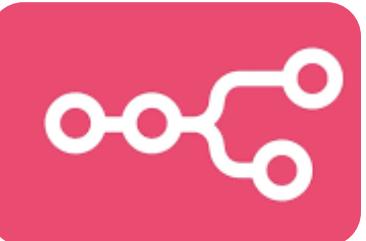

- Used for simple true or false conditions
- Creates only two paths: Yes or No
- Best for basic checks
- Easy to understand for beginners

TechZeen
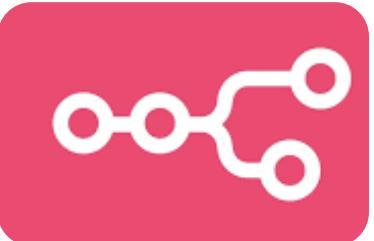

🔁 **Switch Node**
(The Traffic Controller)

- Used when multiple conditions exist
- Can send data to many different paths
- Best for real business workflows
- Handles complex logic cleanly

⚔️ IF vs Switch
